Rapid Rise Spill Berm

Standard and economy fabrics are available on our website or contact us for other fabrics.

One of the main advantages of the Rapid Rise Model is that the sidewalls stay out of the way until they are needed. Foam in the top, outer perimeter of this containment berm's sidewalls raise the walls with the level of the liquid should there be a spill while rigid struts provide added support. But the walls stay down and flat during normal, day-to-day, operations. Helps comply with SPCC and EPA spill containment regulations.

- Sidewalls remain down during normal operations, loading, and unloading. Vehicles and equipment can drive in and out with no set-up or take-down required
- In the case of a spill, the foam ring around the top perimeter of the Containment Berm rises with the level of the spilled liquid.
- Provides quick and easy spill containment for drums, IBCs, vehicles, frac tanks, and other large containers.
- IPI Unsurpassed Service @ 1-800-474-7294 or 1-800-238-4259 After Hours International= 1-941-377-8610.

Ultra-Containment Berm, Rapid-Rise Models - Copolymer 2000™ Available in Virtually Any Size.

Part#	Dimensions ft. (m) Wall Height: 12 in.	Containment Capacity gal.	Weight lbs. (kg)
