## Ultratech Steel IBC Spill Pallet 1184

Store IBCs and other large containers of flammable liquids safely on steel pallets

A vast majority of IBC spill containment products are made from polyethylene. In many ways, polyethylene is the perfect material for spill containment applications. It's strong, it's moldable and it has outstanding chemical resistance. The downside is that it also melts under extreme heat.

A melting/melted IBC spill pallet is an unstable and unsafe IBC spill pallet. The last thing you need is a tote of hazardous material or, worse, **FLAMMABLE** hazardous material spilling and making a bad situation worse.

### Key Features:

- Spill pallets provide secondary containment for intermediate bulk containers (IBCs), tanks, totes and other large containers.
- Excellent for storage of chemicals, hazardous materials, and flammable liquids.
- Heavy-duty, 14-gauge galvanized steel construction provides years of service and excellent chemical resistance
  - will not melt or deform from extreme heat or fire.
- 100% leak free tested
- Removable grating for easy clean-up and maintenance.
- Forkliftable from all sides for easy handling and transport

### Compliance:

- Meets SPCC and EPA Container Storage Regulation 40 CFR 264.175 Spill Containment Regulations.

### Ultratech Steel Pallet IBC 1184 Specifications:

Dimensions: 57" x 57" x 35"

Containment Capacity: 370 Gallons

Weight: 375 lbs.
